SKILLS

- **Programming Languages:** Java, Python, JavaScript/TypeScript
- **Frameworks and Libraries:** React, Next.js, Node.js, Express, HTML, CSS, SCSS, Flutter
- **Database and Cloud:** MySQL, MongoDB, Supabase, AWS, Docker
- **Developer Tools and Infrastructure:** Git, GitHub, Postman, Linux/Unix
- **Core Competencies:** System Design, REST API Development, Data Structures & Algorithms, Caching, Load Balancing, Full-Lifecycle Development

WORK EXPERIENCE

nexvest.in

Apr 2026 – Present

Lead Software Engineer

- **Architected Full-Stack Platform:** Engineered a high-performance investment analysis platform utilizing Next.js, Node.js, and Supabase, enabling real-time stock evaluation and a seamless user experience for 500+ active users.
- **Optimized Data Performance:** Implemented efficient database queries and backend caching strategies, reducing data retrieval latency by 40% and ensuring secure data synchronization.
- **Led End-to-End Development:** Spearheaded the software development lifecycle—translating complex financial logic into responsive UI components and robust backend workflows, accelerating feature delivery by 25%.

Salahkaar Consultants

Dec 2022 – Apr 2023

Software Developer Intern

- Developed and integrated critical components of an Employee Management System utilizing Python, Node.js, and JavaScript, streamlining human resource operations for 200+ active employees.
- Optimized backend SQL queries and database structures, successfully reducing data retrieval time by 15% and enhancing overall application responsiveness.
- Built reusable and modular frontend UI components, establishing a standardized design system that accelerated subsequent feature deployments by 30%.

PROJECTS & RESEARCH

- **Code Summarization Explanation Framework:** Developed an NLP-driven code summarization framework utilizing Python and PyTorch, generating context-aware explanations that reduced manual code review time by 20% to improve source code maintainability.
- **Geospatial Water Pollution Mapping System:** Built an interactive GIS dashboard utilizing Leaflet.js and QGIS, successfully visualizing 10,000+ complex environmental metrics for dynamic spatial data analysis.
- **Personal Productivity Engine:** Engineered a cross-platform routine management application leveraging Flutter and Supabase, establishing a highly responsive personal productivity tool with sub-50ms real-time database syncing.
- **Stock Price Trend Analysis:** Conducted quantitative research on stock price movement patterns, implementing LSTM-based predictive modeling with TensorFlow and Python to accurately forecast market trends with 85% accuracy.

EDUCATION

Christ (Deemed to be University), Bengaluru | *MSc. in Data Science*

2023 – 2026

Symbiosis Institute of Computer Studies and Research, Pune | *B.C.A.*

2020 – 2023

CERTIFICATIONS

Full Stack Web Development (100xDevs); Introduction to AI (NPTEL); Introduction to Deep Learning; Introduction to NLP; Introduction to OpenAI GPT Models; Linear Algebra using Python; Introduction to Unix.
